O ₃	AOT40, calculated from 1h values between May and July	6 000	18 000 average for 5 years

Note:

AOT40 is the sum of differences between the hourly concentration higher than 80 $\mu\text{g.m}^{-3}$ (= 40 ppb) and the value 80 $\mu\text{g.m}^{-3}$ in the given period by using only hourly values measured every day between 8:00 and 20:00 CET.
